

QADRO PROJECTION SCREENS

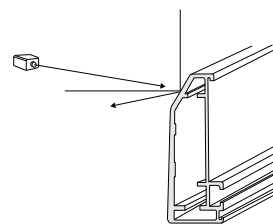

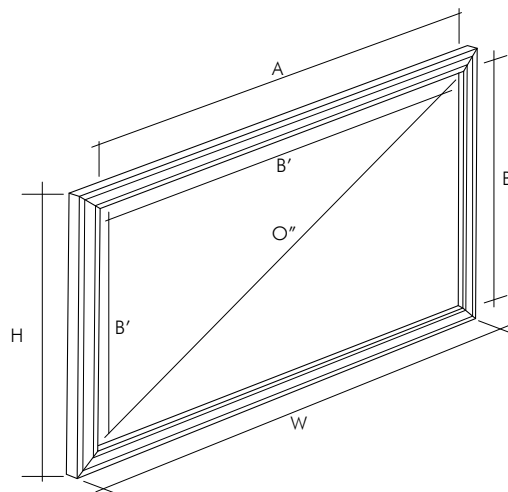

with rigid frame

“Quadro” is a rigid frame screen studied for permanent installations in the high end Home Theatre sector, suitable for those environments where product’s design and finishes represent elements of absolute importance. “Quadro” screens are the result of an accurate design project which brought to a product distinguished by its refined design and particular angle of internal profiles which allows exalting the projection performance, by optimising the reflection’s direction of spurious light. The anchoring system of the projection surface, different from that foreseen for the traditional

“Cori” screen, is characterised by the use of particular steel hooks which guarantee unlimited duration, preventing the inconveniences caused by the wearing out of rubber bands. The possibility to cover the aluminium profiles’ surface with top quality matt black velvet guarantees maximum absorption capacity of the video projector light, thus optimising the image contrast. The outer border was properly studied at an angle, in the interior part, so as to reflect the light outside of the spectator’s visual cone, thus eliminating the undesired reflection effects and determining an excellent contrast.

Technical Features

- **Screens realised** with the following projection fabric: SOFT WHITE, HIGH CONTRAST SOFT GREY (see technical data sheet at pages 3-4-5)
- **Frame in extruded aluminium**, section 70x20 mm, rounded at the interior, epoxy powder coated, smoke grey colour or flocked in black velvet
- **Rear anchoring of the fabric** to the frame by means of steel sliding hooks anchored to the back of the structure for perfect and long-lasting screen flatness
- **Steel plates** for wall anchoring
- **Robust individual packing** in double cardboard type volcano

The particular angle of the internal profiles can enhance the projection performance by optimizing the direction of spurious light reflection.
